

New “Tower” Attachment Now Available

Holds up to 40 lbs* of EnduroSolv® Cooling Water Solid Chemical Product in New Dissolving Unit Configuration

APTech Group and Hydro Systems are pleased to announce the immediate availability of the greatly anticipated Tower attachment for EnduroSolv® dissolving units. The Tower sleeves use the new 5 lb, 6”x 3” solid “discs” of EnduroSolv® solid cooling water chemistry.

Up to 4 disks of the product can be loaded at once – or up to 8 disks in the two bottle units. With these new disc product and dissolver options, EnduroSolv® solid solutions are truly applicable for nearly any size cooling water treatment configuration.

The Tower is now available to order immediately, by itself, to retrofit an existing SolvAll™ or SolvUltima™ dissolving unit. It is also available as the new Tower SolvAll™ 75, Tower SolvUltima™ 150, Tower SolvUltima™ 250 or new Tower SolvUltima™ 225. The Tower SolvUltima™ 250 and the new Tower SolvUltima™ 225 has the benefits of two sleeves serving chemistry at the same time, so up to 40 lbs of product can be loaded at once.

** When used with the Tower SolvUltima™ 250 or the new Tower SolvUltima™ 225.*
