

Ultra-M

ITEM #320701

Our most versatile dissolver ever.

Unmatched flexibility and reliability

The Ultra-M is the flagship model of the enduroTEQ™ series. It utilizes a non-electric mechanical level system and integrated flow control to provide accurate chemical dosing for a variety of water treatment systems.

Built with durable HDPE injection molded body components and high quality chemical resistant materials, you can be confident in its performance regardless of environment or chemical choice.

Whether you are panel-mounting or field erecting, installations are a breeze. The sleek, compact design of the Ultra-M allows for installation in tight spaces and is capable of treating systems both large and small. The dissolver is designed to couple easily so the system can be expanded to treat even the largest boiler and cooling systems.

A chemical pump is required for efficient delivery of the solution created by the dissolver. Please refer to [SolidGuide](#) to generate a site survey and recommendations on pump sizing when choosing the correct pump for your installation.

SYSTEM SPECIFICATIONS

Net weight	9.6 lb	Flow rate	0.45 GPM
Ship weight	13.0 lb	Spray nozzle	Form Specific
Dimensions	10" W x 23" H x 13.5" D	Mounting	3 screws and anchors
Minimum water line requirement	3/8"	Assembly & install time	10 minutes
Water pressure	20 psi - factory set	Electrical requirements	N/A

PRODUCT FEATURES

- Easy to install
- Non-electric level control
- Small footprint
- Can be coupled for use with large systems
- HDPE injection molded body components
- Compatible with discs & bottles
- Designed for chemical resistance
