

PTSA TABS

Simple Solution for Easily Determining System Size

This simple, no-fuss PTSA choice is designed to take up very little space and to determine system volume accurately.

A must have for all water treaters!

- 1 TAB will increase PTSA by 100 ppb per 1,000 gallons.
- For every 1,000 gallons of estimated system volume, add 1 PTSA System Sizing Tablet.
- Use SolidGuide* to determine the number of TABS to add and to calculate system size (eliminating the need to remember formulas and potential miscalculations.)
- Available for purchase as a single tube (10 TABS/Tube - Item 9686T1) or by case of 10 Tubes (Item 9686B8).

*SolidGuide is available in the [App Store/Play Store](#) and at www.aptechgroup.com/
